ARTIFICIAL INTELLIGENCE Natural Disasters Intensity Analysis& Classification Using AI

Dat	26th
Team	PNT2022TMID3368
Project	Natural Disaster Intensity
Name	Analysis & Classification

CYCLONE

Variables/Model	Units	Coverage	Spatial Coverage	Levels
geopotential height	m	4-times daily and daily	2.5 x 2.5 degree grid	multiple level
precipitable water	kg m ²	4-times daily		surface
relative humidity	%			*
sea surface pressure (SLP)	hPa			
u and v wind components	m s ⁻⁴		•	
air temperature	°C	•		
relative vorticity	10 ⁻⁵ s ⁻¹	*		
moisture convergence* g kg ⁻¹ s ⁻¹ hourly	•	•		
Convective Available Potential Energy (CAPE)	J kg ⁻¹	•	0.5x0.5 degree grid	8
total of precipitation mm "	,			
total of precipitation	mm	daily	0.25x0.25-degree grid	
HYSPLIT backward trajectory	AGL	hourly	360 x 180 at	multiple level
	geopotential height precipitable water relative humidity sea surface pressure (SLP) u and v wind components air temperature relative vorticity moisture convergence* Convective Available Potential Energy (CAPE) total of precipitation	geopotential height m precipitable water kg m² relative humidity % sea surface pressure (SLP) hPa u and v wind components m s¹ air temperature 'C relative vorticity 10° s¹ moisture convergence* g kg⁻¹ s⁻¹ Convective Available Potential Energy (CAPE) total of precipitation mm total of precipitation mm	geopotential height m 4-times daily and daily precipitable water kg m² 4-times daily relative humidity % " sea surface pressure (SLP) hPa u and v wind components m s¹ " air temperature °C " relative vorticity 10³ s¹¹ " moisture convergence* g kg⁻¹ s⁻¹ hourly Convective Available Potential Energy (CAPE) total of precipitation mm daily Coverage 4-times daily and daily	geopotential height m 4-times daily and daily 2.5 x 2.5 degree grid precipitable water kg m² 4-times daily relative humidity % " " sea surface pressure (SLP) hPa " " u and v wind components m s⁴ " " relative vorticity 10³ s²¹ " " moisture convergence* g kg⁻¹ s⁻¹ hourly " Convective Available Potential Energy (CAPE) total of precipitation mm daily 0.25x0.25-degree grid total of precipitation mm daily 0.25x0.25-degree grid 360 x 180 mt

Moisture convergence was computed with GrADS software using 7 variables: relative humidity, air temperature, vapour pressu nixing ratio, u and v wind components and dew point temperature.
